**High Frequency**

**Eclipse II Plus Slimline**  
Fast or Opportunity Charging

**Eclipse II Slimline**  
Conventional Charging

**HE SERIES**  
Fully CEC  
Compliant

## The Industry Standard For All Your Charging Needs

- ⚡ Utilizes space efficiently – saves valuable floor space
- ⚡ Optimized to meet stringent new California standards for lowest overall energy usage
- ⚡ Conversion Efficiency balanced for minimum total AC energy usage
- ⚡ Adapts to all battery types and applications with user selectable charge algorithms
- ⚡ Reduced power operating modes minimize power usage when idle
- ⚡ Eclipse II Slimline HE is Datalink<sup>2</sup> compatible
- ⚡ Eclipse II Slim-Line Plus opportunity charger has the Datalink<sup>2</sup> wireless module built in
- ⚡ UL, cUL and CEC listed

# eclipse II Slim-line Series

## Eclipse II Slimline HE

*The Eclipse II Slimline HE is the most adaptive charging solution on the market, and it maintains the same quality you've come to expect from Ametek. The opportunity charging function will sustain the battery between 20% and 80% state of charge via short, opportunistic charges and is able to fully charge your battery in 6 hours or less. Conventional charging mode recharges any fully discharged lead-acid battery within the charger's rated capacity, flooded or sealed, in 8 hours or less.*

*Advanced IGBT high frequency power conversion circuitry supplies efficient, reliable service in all modes and supports the fast charging capability of the Eclipse II Slimline for when you need your battery available as soon as possible.*

### Low Cost Efficient Operation

The high power demands of opportunity chargers require an energy efficient design. The advanced high frequency design of the Eclipse II Slimline is extremely efficient at up to 93%, converting AC power to usable DC power with the minimum possible impact on the utility grid. The .95 power factor minimizes AC amp draw and thereby reduces installation costs.

Inside View

### EC2000 Control

The new EC2000 control is nearly identical in functionality and programmability to AMETEK's popular UC2000 used in the Ultra product line. With a 40 character, alphanumeric LCD display, easy to read information is always available to follow the charger's status. In addition, 4 bright LEDs provide charge status at a glance and the sealed membrane keypad allows for easy customer interface.

### Energy Saving Features

Further enhance energy savings by utilizing the EC2000's programmable start modes. Using the **Delayed** or **Time-of-Day** start modes of the EC2000 to charge your batteries during off-peak hours can yield up to 50% in additional energy cost saving. The EC2000 also offers **Time-of-Day Block-Out** to lower utility bills and reduce peak demand by blocking out a period of charging time on one or more chargers.

### Minimize Hydrogen Gas Emissions

The No-Gassing feature of the Eclipse II Slimline allows a programmable time to be set so that should the charger reach the gassing portion of the charge cycle within the set time, the charger would stop charging until the set time has elapsed. Only at this point would the charger continue to charge and take the battery to charge complete.

### Automatic or Manual Equalize Operation

All Eclipse II Slimline HE chargers are shipped with Automatic Equalize enabled to ensure that your batteries routinely receive an equalize charge of three hours beyond the normal DV/DT charger termination. Auto Equalize can be set for one of three options: Number of Cycles, Day of Week or BID.

When any automatic equalize function is selected, the equalize button on the keyboard is disabled to prevent unnecessary equalize charges. The ability to

Detail View of CID

automatically equalize batteries provides an exact schedule of equalize charges for better battery maintenance and longer life.

### BID Equalization Function

When an AMETEK BID is attached to the battery, it tracks and records completed charge cycles. When the battery is connected to the charger, it reads the BID information to determine how many charge cycles have been completed since it was last equalized. When the number of completed cycles matches the user selected equalize interval, the charger will equalize that battery. This ensures that each battery is equalized at the intervals selected by the customer regardless of which charger is connected.

### Battery Cool Down

Battery cool down allows the battery to cool down before use, which allows for increased control of battery rotation, resulting in increased battery efficiency and longer life. Battery cool down can be programmed from the EC2000 keypad from 0-8 hours in one hour increments. After the recharge is complete, the display will read "battery cool down" until the predetermined cool down period has ended, at which time the charge complete LED is illuminated.

### Regulation

The Eclipse II Slimline HE is designed to hold the finish current to within +/-2% over a wide range of line voltage variations.

### Mounting Options

The Eclipse II Slimline comes with removable legs and wall mounting brackets for shelf or wall mounting.

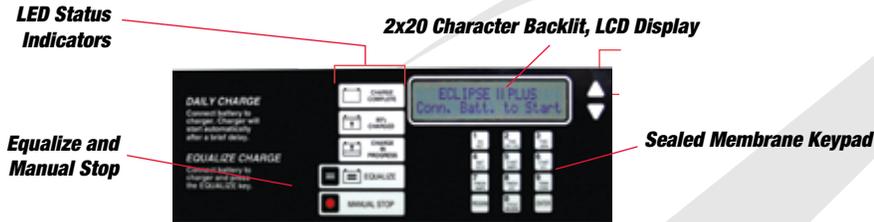

### Quiet Fan Cooling

The charger utilizes an advanced fan design to cool the electronics, extending life while providing low sound levels for quiet operation.

## High Frequency

**Eclipse II Plus Slimline – Fast or Opportunity Charging**

**Eclipse II Slimline – Conventional Charging**

### 3 Year Full Warranty

Repair costs are minimized through a 3 year full warranty for the original purchaser. Warranty covers labor, travel, and parts replacement.

### Prevent Overcharging

Back-up timers protect your batteries from overcharging by shutting the charger off in the event that the battery does not reach 80% charged in 9 hours, or does not reach charge complete within 4 hours of reaching the 80% charged point. The charger also monitors the ampere hours returned and if the ampere hours returned exceed the rated ampere hour capacity by 125%, the charger will shutdown, protecting your battery from harmful overcharging. (150% on equalize cycles.)

### Charge Cycle Archive

The charger will collect and save 21 items of charge cycle information for the last 500 charge cycles. This valuable information can then be reviewed manually from the front panel, or it can also be downloaded wirelessly using our Datalink<sup>2</sup> system.

### Operating Modes

**Multi-cell:** automatically matches output voltage to battery

**Fixed-cell:** set for specific battery voltage, rejects others

**BID mode:** information programmed in BID determines charger operation

**Timer Start:** operated as a manual timer for maintenance and shop charging

### Refresh Charge

Start off the week with fully charged batteries. Anytime the battery is left plugged into the charger for an extended time, such as over a long weekend, the charger will restart automatically and top off the battery to ensure your trucks are running at peak performance.

### Monitor Battery and Charger Operation

With no spare batteries, it's important to know that your batteries are being properly charged and maintained. The functionality of the Eclipse II Slimline HE chargers can be greatly enhanced through the addition of the optional Battery Identification Module, BID. The BID is programmed with battery information including rated AH capacity, rated voltage, battery type, and start rate for opportunity charging.

Batteries with BIDs will be automatically recognized by the charger, allowing the charger to charge at the proper voltage and current levels for the type of battery connected. The BID eliminates any manual charger settings. The Eclipse II Slimline HE charger charges all battery types.

### BID with Electrolyte Sensor

The addition of an electrolyte sensor to the standard BID allows the charger to sense when the connected battery needs to be checked for electrolyte levels.

At charge complete, the BID will send a signal to the charger that the electrolyte level is low, and the control will display a message instructing the operator to check the battery.

### Wireless Fleet Management System

The Eclipse II Slimline HE is Datalink<sup>2</sup> compatible and the Eclipse II Plus Slimline has the Datalink<sup>2</sup> wireless module built-in. Datalink<sup>2</sup> gives you the opportunity to monitor battery usage and identify bad situations before they become problems that lead to down time.

Datalink<sup>2</sup> greatly enhances the ability to collect charge and discharge data from the charger. The transfer of data occurs wirelessly utilizing our proprietary wireless network in combination with a

powerful transceiver. Typical communication range is 1,500 ft in a normal operating environment and with communication between chargers, this range is doubled to a 3,000 ft radius. The actual range in your facility can vary greatly based on numerous factors. It is not necessary for the system to be integrated into the customer's network.

### Battery Identification Module

The functionality of the Eclipse II Slimline HE chargers scan be greatly enhanced through the addition of the optional Battery Identification Module, BID. The BID is

programmed with battery information including rated AH capacity, rated voltage, battery type and more.

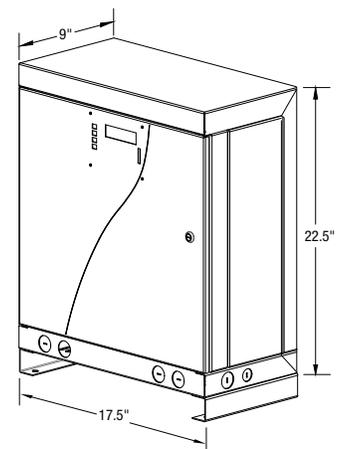

### BID with Ampere Hour Accumulator

When equipped, a battery with an ampere-hour accumulator BID will transmit to the EC2000 control, the updated AH data. The accumulated

AHs for both charge and discharge cycles are stored in the BID along with the lifetime average battery temperature, and is readable from the EC2000 control and through the Datalink<sup>2</sup> System. The accumulated ampere-hours are essential to support battery warranty and to predict battery end of life.

### Dimensions

Add 1-1/2" height for removable legs  
Add 1-1/2" width for removable wall brackets
